## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-9 are rejected under 35 U.S.C. 102(e) as being anticipated by Xie (USPN 6798420).

Regarding claims 1 and 4, Xie teaches a display driving system capable of reducing the required memory space, and simplifying the control circuit, (col. 32, lines 65-67 and col. 33, lines 1-5) the system comprising: a plurality of memories capable of synchronously being read and written for being used as buffers for frame accessing; (col. 2, lines 22-32 and col. 66, lines 57-66 and Fig. 32 (1104, 1108) an image signal generator for processing the digital image; (col. 45, lines 32-39 and Fig. 26 (162)) a timing controller for controlling the plurality of memories capable of synchronously being read and written and the timing; (col. 66, lines 57-61 and Fig. 40(1634)) and a plurality of data drivers positioned on a display device panel for receiving the image data and displaying it on the panel (col. 9, lines 66-67 and col. 10, lines 1-3).

Regarding claim 2, Xie teaches the plurality of memories capable of synchronously being read and written are used for separately accessing the image data on

the upper and lower half portions of the panel (col. 2, lines 22-32 and col. 66, lines 57-66).

Regarding claim 3, Xie teaches the output amount of the image data by the plurality of memories capable of synchronously being read and written is one half of the input amount of the image data (col. 2, lines 22-32 and col. 66, lines 57-66).

Regarding claim 5, Xie teaches the first memory is connected to the first data driver (Fig. 32 (1104) and col. 66, lines 57-66).

Regarding claim 6, Xie teaches the first memory is used for accessing the image data of the upper half portion of the panel. (Fig. 32 (1104) and col. 66, lines 57-66).

Regarding claim 7, Xie teaches the second memory is connected to the second data driver (Fig. 32 (1108) and col. 66, lines 57-66).

Regarding claim 8, Xie teaches the second memory is used for accessing the image data of the lower half portion of the panel (Fig. 32 (1108) and col. 66, lines 57-66).

Regarding claim 9, Xie teaches amount of the image data by the first memory and the second memory is a half of the input amount of the image data (Fig. 32 (1104, 1108) and col. 66, lines 57-66).
